Pioneer In Brining EPS Panels To Pakistan

**EPS SMART
WALL PANELS**

EPS Smart Panel

EPS (Expanded Polystyrene) Smart Panel is composed of an exterior surface and interior core filling, to form a non-load bearing lightweight composite wall panel. The exterior surface on both sides are calcium silicate boards / cement boards and the middle core is filled with EPS beads, cement, flyash etc. EPS is a versatile durable material that offers excellent insulation properties.

EPS Smart Panel is lightweight energy saving technology, which is easy to install, reducing construction time and effort. EPS Smart Panels occupy smaller area effectively increasing usable floor space, which can eventually contribute to economic benefits. They are fire resistant, sound proof, water and moisture proof, and are also built to withstand seismic activities.
